

May Rose Hurst

DOB: 05/14/2008 (15 Months)

Visit Date: August 20, 2009

PRESENT ILLNESS INFORMATION

Chief Complaint: new pt, not referred. Eval of ocular status. MOC feels pt does not recognize MOC if she's silent when she walks into a room. She does not react until MOC makes noise. Pt will bat at an object dangling in front of her (purposeful). Pt tends to use extreme head positions to see. Aside what is mentioned in the hx, pt is taking a new neurologic medication, CHlonasapam (bid), Lanzoprasole (bid). Pt is anywhere between 6-12 mos developmentally.

HPI#1: Blurry vision

Evaluation of: Blurry vision. Location: both eyes. Onset: at birth. Quality: trouble seeing. Context: FT. Aggravating factors: none. Relieving factors: none. Associated symptoms: blurred vision. Previous treatment: none.
